

ALS Press Release- Steve Richardson.

Envivo is pleased to introduce Steve Richardson as head of our aerial survey division.

Originally from South Africa, he headed up one of the largest Aerial Survey companies' operations. Steve has a range of international experience offering airborne LiDAR and photogrammetric surveys to multiple international agencies.

Steve has been involved in a range of high-profile projects involving governmental agencies, state owned enterprises, international funding agencies and private investors. Some of his notable successful projects included the Mount Coffee hydroelectric Dam upgrade project totalling 3300sq. kilometres of LiDAR Surveys as part of the West African Power Pool Electrification program (www.ecowapp.org), the annual survey of the Pilcomayo River in Paraguay for prediction and optimisation of the river's hydrological movement as well as a range of powerline and infrastructure surveys stretching up the east and western regions of the African Continent.

Steve has also consulted to government departments in South America and East Africa ensuring that project specifications are appropriate, fit for purpose and relevant to the current technological best practises.

Highly adaptable to his client's needs and with a wealth of advanced 3-Dimensional solutions, Steve is always happy to discuss his clients' needs and tailor make an appropriate solution for them.

Feel free to contact him to discuss your project's needs.

Flying high above the Ethiopian Highlands

Sunset over the Paraguay Desert Regions (Chaco)

Waiting for weather to pass in the West African Tropical highlands

A stunning day for flying.
